Renewable Corn Oil

Renewable Corn Oil

Renewable corn oil is derived from the production of corn-based ethanol. It is a high-quality fat that is utilized as an animal feed ingredient. This product is intended for non-human consumption only.

Green Plains produces renewable corn oil at multiple locations across the United States and it is available throughout the year.

Renewable corn oil is a light reddish-orange liquid that should be stored in a closed container with minimal exposure to light.

Renewable corn oil is produced by extraction from thin stillage during the ethanol production process. This occurs after fermentation and distillation, and before the drying process produces dried distillers grains with solubles (DDGS.)

Renewable Corn Oil Production Process

Renewable Corn Oil

Origin

Renewable corn oil distributed by Green Plains is produced from crops that meet the renewable Biomass definition stated in 40 CFR § 80.1401.

Allergens

Green Plains Inc. certifies its renewable corn oil to be free from the following:

- Milk
- Egg
- Fish
- Crustacean shellfish
- Tree nuts
- Wheat
- Peanuts
- Soybeans

Determination of suitability in renewable corn oil for the intended use is the sole responsibility of the end user. This statement is valid and in effect for all products described herein until otherwise notified in writing by Green Plains Inc.

BSE/TSE

No animal-derived materials are associated with the manufacturing process, storage or transportation of Green Plains Trade Group LLC products.

Exposure potential from Bovine and Transmissible Spongiform Encephalopathy (BSE and TSE) is limited. Animal carcasses are not involved with the production process or on site at these facilities. Cross-contamination potential from transportation or carriers is limited through the transportation policy and ingredient carrier questionnaire.

This information is not a product specification; therefore, the product will not be tested for animal-derived content.
